

PROJECT INSTRUCTIONS

Install the followings to run the project.

I. JAVA JDK

To avoid incompatibility with Spring Boot, JDK 11 is used for this project.

Navigate to <https://adoptium.net/?variant=openjdk11> , and download and run the OpenJDK 11 (LTS) Installer. Choose default installation options. Then reboot

II. Eclipse

Download Eclipse IDE through: <https://eclipse.org/downloads/>, choose the latest Eclipse Installer. After executing the installer package, choose Eclipse IDE for Enterprise Java Developers.

III. Spring tools

From eclipse, navigate to Help -> Eclipse Marketplace to install Spring Tools 4.

IV. NPM

Navigate to <https://nodejs.org/en/download/> and download the Node.JS installer for your system.

To run the project:

1. Open Eclipse IDE and navigate to the project
2. Run as Spring Boot app
3. Open browser -> localhost:8080
